

# Cut the cable cord.

## How to Stream Video Content to Your TV

There's never been a better time to get all of your television programming via the internet. You could save hundreds of dollars a year by transitioning from traditional pay TV to online streaming video. Channels that were once only available through subscription to cable or satellite providers are now available online. You only pay for the channels and programming you want with no contracts to sign and no equipment to rent. Make a smooth transition by following these simple steps.

### Step 1 Internet

#### Get the fastest internet in Westfield

With a Gigabit internet connection from Whip City Fiber (1,000 Mbps of download and upload speeds), you will have enough speed to stream content to multiple TVs, computers, tablets, and phones in your household.

### Step 2 HD Antenna

#### Make sure you have the right antenna

To pick up the major networks (ABC, CBS, FOX, and NBC), along with select other channels (PBS, CW, etc.), you'll need a good HD antenna which will run from \$30 to \$150. Our team can help you pick the best model for your situation and set up FREE installation\* along with your Whip City Fiber service.

\*free installation available for a limited time

### Step 3 Streaming Device

#### Pick a streaming device

If you have a Smart TV you may not need a streaming device. If you don't have a Smart TV, a streaming device will be the bridge between your internet connection and your TV. Some of the popular streaming devices are Amazon FireTV, Apple TV, Chromecast, Playstation, Roku, and Xbox.

### Step 4 Streaming Service(s)

#### Select your streaming service(s)

Your streaming device will need a service account to access movies and other content. Popular streaming services are Amazon Instant Video, Google Play, HBO Now, Hulu, iTunes, Netflix and Showtime. With these services you can view virtually any programming available from cable and satellite providers.

### Step 5

# Enjoy!
